

Tone of Text Question

(1) Amoebas vary greatly in size and shape, but basically they contain the same structures found in most animal cells. (2) The cell membrane is usually highly elastic, although in one group, the verrucose amoebas, the membrane is thickened and somewhat stiff. (3) The amoeba's body is divided into a relatively rigid outer zone, called ectoplasm. (4) The endoplasm contains one or more nuclei, a number of mitochondria and other typical cell organelles, and several vacuoles containing food particles. (5) Usually, a contractile vacuole that *expels* fluids is also present.

(6) The most distinctive anatomical feature of amoebas is *their* capacity to form pseudopods of strikingly different forms, and this trait is used as the basis for classifying amoebas into different groups. (7) Some amoebas, including the common amoeba (*Amoebas proteus*), have bluntly rounded pseudopods, called lobopods, which are composed of both endoplasm and ectoplasm. (8) Others have *slender*, tapering pseudopod, called filopods, composed only of ectoplasm.

1 What is the tone of the passage?

- (A) Humorous
- (B) Argumentative
- (C) Descriptive
- (D) Cynical
- (E) Narrative

In today's fast-paced, cyber-linked world, it would be hard to imagine working without the internet. Most of us would probably feel pretty desperate. Well, how about trying to live a day without water, a real every-day nightmare for some people. I know how it feels.

After suffering from one-day emergency shutdown of my local water supply, which prevented me from getting a single drop of water from the tap, let alone showering or flushing the toilet, I started to think how ironic it is that on a planet where water covers 71 percent of its surface, I suddenly had no.

But when I learned that just over 2 percent of the total volume of water in the global cycle is fresh water, and that most of that is locked up as polar ice caps and in glaciers, I became horrified.

Yes, horrified at the thought of more than 6 billion people sharing this small amount of water that is available. It made me wonder: is there anything I can do to use this precious resource more wisely?

That question leads me to one of my favorite lines from the movie *Evan Almighty*. "How do we change the world? By doing one act of random kindness at a time". It's a message that applies to all aspects of life, including in conserving water.

So, to begin with, I started to list some of my water-consuming activities. And from various sources, I found out that taking a bath is the biggest water consumer (about 45 percent of the total daily consumption), followed by toilet flushing (25 percent) and kitchen activities (15 percent).

A survey conducted in 2006 by the Directorate of Water Development of the Public Works Ministry showed that the average daily use of fresh water in Indonesia was 144 liters per person. Based on that figure, bathing, flushing and kitchen activities represent 65, 36, and 21.5 liters respectively or 122.5 liters in total. Assuming the Indonesian population represents around 230 million people, all having equal access to 122.5 liters per day, can you imagine what happens to that 2% of global fresh water? You do the math!

Those numbers have given me a stronger urge to be more efficient with my personal consumption of fresh water. So, I started off with my-bathroom. First, I readjusted the showerhead to a low-flow version

and took shorter showers, 25 less than 5 minutes long, since that could already reduce my water use approximately by half.

Second, I tried a simple trick suggested by a friend to save water in the toilet tank, by placing a one-liter plastic bottle filled with water in the tank. This way, I save one liter of fresh water every time I flush the toilet. If the toilet is used 10 times a day, I have already saved 10 liters of fresh water.

And since I am not really a kitchen type of person, I believe my water spending in that department wouldn't 30 exceed 10 liters per day.

So in total, I could save around 56.6 liters per day from bathroom and kitchen activities. Not bad for a start, as there are still more things that can be done to efficiently use water.

2. The tone of this passage could best be described as
- (A) concerned *khawatir*
 - (B) calm *tenang*
 - (C) emotional *emosional*
 - (D) informative *informatif*
 - (E) exaggerated *berlebihan*
- after I read all the text, I assume that the writer being in a panic due to the water crisis and trying to reduce his personal water usage. So I can conclude that the text has concerned tone*

The majority of Indonesians find distance learning costly, especially among those with a lower socioeconomic status, a survey conducted by Saiful Mujani Research & Consulting (SMRC) has shown. The survey, which was conducted from Aug. 5 to 8 and polled 2,201 respondents across the country, found that only 6 percent of respondents said they did not find distance learning costly. *Pembelajaran jarak jauh yang mahal*

"Among respondents with family members carrying out distance learning, 67 percent them said it was very or quite costly," SMRC public policy manager Tati Wardi said in a virtual presser on Tuesday. Tati said the government should pay attention to this issue as students had been forced to study from home for months during the COVID-19 pandemic.

The survey showed that the higher a person's education, the lower the tendency to state that distance learning was quite or heavily costly, and the higher a person's income, the lower the tendency to state that it was costly. "These findings indicate a crucial problem regarding the right to education and its relation to socioeconomic status. Those with higher incomes do not see it as a heavy burden, but it doesn't apply to the poor. The government needs to respond to this gap."

3. The author's attitude towards the text is ...
- (A) Tolerant *toleran*
 - (B) Unhappy *tidak senang*
 - (C) Worried *cemas*
 - (D) Critical *mengkritik*
 - (E) Concerned *khawatir*
- after I read this text, I assume that the writer is concerned about high price that parents must spend for distance learning during pandemic. So I thought the authors tone of this text is concerned*

4. The sentence "Among respondents with family members carrying out distance learning, 67 percent them said it was very or quite costly." means that ...
- (A) 67 percent of distance learning was very costly
 - (B) 67 percent Family members said distance learning was very costly
 - (C) 67 percent respondents said distance learning was very costly
 - (D) 67 family members said distance learning was very costly
 - (E) 67 respondents said distance learning was very costly
- di antara responden dengan anggota keluarga yang melakukan pembelajaran jarak jauh, 67 persen dari mereka itu mengatakan itu sangat mahal atau agak mahal*
67 persen responden mengatakan pembelajaran jarak jauh sangat mahal

Mengganggu

Unlike beloved children's stories, nature is a cruel, hard world that is painted not in water colors but in blood. A study found that chemicals released by plants as they are eaten can help push caterpillars to cannibalism. Many plants release the chemical methyl jasmonate when stressed or damaged. Getting gnawed on by a caterpillar is stressful, so when the caterpillars start biting, the chemical flare goes up. Other nearby plants sense the flare and start producing their own methyl jasmonate, building a camouflage around their leaves and stems.

tidak baik

bakong

Once all the food sources taste terrible, caterpillars turn to the next available meal; each other. Plants with the time to build up a strong defence can make their leaves so unappetizing that caterpillars will start eating each other to get their fill, leaving the plant alone.

gak enak

Researchers now plan to also look into how insect viruses are transferred during their more carnivorous period. If viruses that harm caterpillars are transferred more easily by cannibalism, that could be a gain for the plants. Not only are their leaves protected from pests, but now those predators are spreading disease amongst themselves, reducing the herbivore population further.

Interestingly enough, cannibalism can serve some important functions among these herbivores. Eating each other literally takes the competition out of the food chain, and keeps the surviving population strong in a time when food might be scarce.

The tone of this passage is ...

- (A) Critical kritik
- (B) Amused geli
- (C) Objective objektif
- (D) Outraged marah
- (E) Humorous lucu

after I read this text, and (found how) the writer tell the reader everything about cannibalism on caterpillars, I assume the author's tone for this text is objective.

Scientists used artificial intelligence (AI) to study the spatial relationships between main earthquakes and their aftershocks. In tests, AI predicted the aftershock locations better than the traditional methods that many seismologists use.

In 1992, a series of earthquakes prompted an outbreak of interest among seismologists. They were trying to map out where exactly an aftershock might occur based on how a mainshock might shift stresses on other faults. After 1992, researchers began trying to refine the complicated stress change patterns using different criteria. The most used criterion, the Coulomb failure stress change, depends on fault orientations. However, stresses can push on the faults from many directions at once. Consequently, fault orientations in the subsurface can be complicated.

Using AI, the data included more than locations and magnitudes. The data considered different measures of changes in stress on the faults from the quakes. The AI learned from the data to determine how likely an aftershock was to occur in a specific place. The team tested how precise the system could pinpoint aftershock locations using data from another 30,000 mainshock-aftershock pairs. The AI consistently predicted aftershock locations much better than the Coulomb failure criterion.

However, the study focuses just on permanent shifts in stress due to a quake. Aftershocks may also be triggered by a more momentary source of stress. A quake's rumbling through the ground could produce this kind of stress. Another question is whether AI-based forecast system could leap into action quickly enough after a quake. The predictions in the new study benefited from a lot of information about which faults slipped and by how much. In the immediate aftermath of a big quake, such data wouldn't be available for at least a day.

The tone of this passage is ...

sounds like criticism

The author is critic about ai in earthquake detector

- ~~(A) Critical~~ *kritikal*
(B) Pessimistic *pesimis*
(C) Concerned *khawatir*
(D) Informative *informatif*
(E) Persuasive *persuasif*

It can be inferred from the text that. . .

- (A) prior to 1992, research was focused on measuring the magnitude of the main earthquake.
(B) an aftershock indicates that the subsurface is undergoing a permanent fault shift.
~~(C) due to its limitations, AI most likely cannot perform as fast as it is needed.~~ *kelebihan baturnya, ai tidak bisa melakukan performansi sebaik yang diinginkan*
(D) the more powerful an earthquake, the more aftershocks will occur.
(E) the aftershock almost always immediately follows an earthquake.

Australians will sing a different version of their national anthem from 1 January after Prime Minister Scott Morrison announced a change to the words on Thursday. The anthem will no longer refer to Australia as "young and free" in an attempt to reflect the country's long indigenous history. The announcement was a surprise but welcomed across the government. *psbun*

Mr Morrison said he hopes the change will create a "spirit of unity". People inhabited Australia for tens of thousands of years before it was colonised by mostly white English settlers in the 18th Century. The line to be removed in the anthem, which is called Advance Australia Fair, is "For we are young and free". Instead people will sing "For we are one and free."

Earlier this year, the leader of New South Wales state, Premier Gladys Berejiklian, suggested the change, saying the current wording ignored Australia's "proud First Nations culture".

"Changing 'young and free' to 'one and free' takes nothing away, but I believe it adds much," Prime Minister Morrison, who is a conservative, said. "It recognises the distance we have travelled as a nation. It recognises that our national story is drawn from more than 300 national ancestries and language groups and we are the most successful multicultural nation on earth." He also said the change celebrated the unity Australia formed during the coronavirus pandemic.

Opposition leader Anthony Albanese commented that the country "should be proud of the fact that we have the oldest continuous civilisation on the planet right here with First Nations people".

The tone of this passage is ...

- (A) Critical *mengecilkan*
(B) Pessimistic *pesimis*
(C) Concerned *khawatir*
(D) Informative *informatif*
(E) Persuasive *persuasif*

after I read all about this text, I thought the author's tone is informative because he inform all about the topic without any adding

Based on paragraph 2, why does the Australian Government need to change some lines of their national anthem ...

- (A) To dissect the indigenous people from Australian culture
~~(B) To embrace the diversity in Australia~~ *untuk merangkul perbedaan di Australia*
~~(C) To reduce the white centric feeling in Australia~~
(D) To provide the history of Australia settlement
(E) To colonise the indigenous people once again

Despite their advantages, technological advancements have led to the polarization of the labor market. While middle-skill jobs become increasingly automated, high-skill jobs that require a combination of cognitive skills, creative acumen ^{kecakapan} and leadership expertise have not been affected. Similarly, low-skill jobs that require customer service have been drastically changed by automated systems. Therefore, it is the low-class and middle-skill routine occupations ^{pekerjaan} that have been decimated by the technological 5 revolution.

As low-skill and middle-skill opportunities shrink, giving rise to high jobs, wages ^{gaji} also become either high or low. This disparity has already impacted the economy and will continue to change the labor market's landscape. Although it naturally impacts current employees, students and job-seekers should also take heed ^{memperhatikan} of the patterns that have emerged. Since the jobs that are harder to automate involve creativity, cognition and social skills, job-seekers should develop these intangible qualities to make themselves 10 more valuable to potential employers.

The medical field has also been impacted by automated machines. Many diagnostic tests and surgical tools have become automated by complex machines and programs. However, the human touch in the medical field is essential as it ensures that a patient is being treated as a human instead of just as a body. A nurse's interaction with his or her patients is invaluable and impossible to effectively replicate. Similarly, while machines can assist with tasks before, during, and after a surgery, a machine cannot replace a skilled human surgeon since it lacks intuitions and instincts.

10. What can be inferred about high-skill jobs?

- (A) There is a decline in vacancy.
- (B) They are at great risk for automation.
- (C) They require more cognitive skills than social skills.
- (D) They play a role in the automation of low-skill and middle-class jobs.
- ~~(E) They are relatively safe from being automated in the labor market.~~

They not impacted by digitalization of work
