

Finding Contextual Meaning

In another study, conducted in Russia, a drug made from garlic extract was given to workers in industrial plants who were suffering from chronic lead poisoning. The daily doses of garlic improved the symptoms of chronic lead poisoning and lowered the high porphyrin levels in the urine. The preparation also normalized the elevated blood pressure in the majority of workers. Russian researchers believe that the efficacy of the garlic preparation is due to garlic's high content of sulfur compounds.

1. The word "efficacy" in paragraph 4 is closest in meaning to which of the following?

- ☒ (A) effectiveness **efektifitas**
(B) use **penggunaan**
(C) consumption **konsumsi**
(D) result **hasil**
(E) strength **kekuatan**

Because halitosis originates in the mouth, it is virtually undetectable by your own sense of smell. You may notice a bitter, sour taste in your mouth or a whitish coating on the back of your tongue, but you generally find out there is a problem when a family member, friend or co-worker brings it to your attention. At that point, you need an effective, long-lasting and easy-to-use method of eliminating the problem. Without proper treatment, chronic bad breath can lead to a loss of confidence and self-esteem, and it can even result in depression. The problem can adversely affect your marriage, social life, career and relationship with family members. What is needed is a quick and effective treatment that works naturally with no side effects.

As a dentist with a degree in bacteriology, Dr. Katz has been keenly aware of the widespread nature of this problem. It was not until his daughter came to him about her halitosis, however, that he began to research the problem in earnest. His studies led him to an amazing discovery about the source of bad breath: it does not originate in the digestive system, and the food you eat has no direct effect on your breath.

Certain foods, however, contribute to the production of sulfurous gases in the back of the mouth. Acids in coffee and proteins in dairy products exacerbate the problem. Mints and mouthwashes intended to mask or prevent bad breath actually worsen the condition because sugar and alcohol dries out the mouth. Many common medications for everything from high blood pressure to depression have the same drying effect, resulting in the formation of odorous gases. Mucous from postnasal drip contains dense proteins that are full of sulfur. Some treatments for halitosis contain Sodium Lauryl Sulfate, which can cause canker sores. The only effective means of eliminating the sulfur gas production is to introduce oxygen to the bacteria, causing them to produce tasteless, odorless sulfates.

2. The word "nature" in paragraph 2 is closest in meaning to which of the following?

- ☒ (A) characteristic **karakteristik**
(B) existence **keberadaan**
(C) quality **kuualitas**
(D) state **keberadaan**
(E) kind **jenis, macam, ragam**

3. The word "amazing" in paragraph 2 is closest meaning to which of the following?

- (A) well-known **terkenal**
(B) outstanding **terkenal, terkemuka**
(C) striking **luas biasa**
☒ (D) surprising **mengkejutkan**
(E) unusual **tidak biasa**

4. The word "exacerbate" in paragraph 3 is closest in meaning to which of the following?

menambah, memperburuk

- (A) exaggerate *berlebihan*
- (B) evoke *menimbulkan*
- ~~(C) worsen~~ *memperparah*
- (D) cause *menyebabkan*
- (E) irritate *Meng-iritasi*

Taking advantage from a high birth rate and the enormous potential of stem cell research, India's biotechnology firms are coaxing more parents to bank blood from their newly born's umbilical cord from which the blood cells are frozen and to be revived if and when there is a scientific breakthrough. Blood which is extracted from the baby's umbilical cord and placenta **discarded** after birth are loaded with stem cells. They are master cells from which the body's immune and blood system originate and which can develop into cells of any organ. Doctors harvest the blood cells once the umbilical cord is clamped and cut, using a collection kit. The blood is then packaged in a special shipping material provided. The company officials then ship the package to the laboratory where the stem cells are processed and tested for various diseases.

These cells can help cure more than 75 serious ailments, according to Nalini Khrisnan, a medical advisor of LifeCell, a firm which deals in preserving cord blood. She further says that collecting and preserving the baby's cord blood stem cells is a security blanket for the baby itself and its immediate family members. It is effective in the treatment of leukemia, anaemia, inherited disorders and several other deficiencies of the immune system. Even lifestyle diseases such as diabetes, **liver disorders** and heart ailments and infectious diseases such as hepatitis, HIV and malaria can also be treated with stem cells.

5. The word "**discarded**" in paragraph 1 is closest in meaning to

- ~~(A) thrown away~~ *dibuang*
- (B) taken from *diambil dari*
- (C) collected from *dikumpulkan*
- (D) pulled out *dikeluarkan*
- (E) put into *dimasukkan ke dalam*

6. The word "**disorders**" in paragraph 2 can best be replaced by ...

- (A) abnormalities *tidak normal*
- (B) troubles *gangguan*
- ~~(C) disturbances~~ *gangguan*
- (D) difficulties *kesusahan*
- (E) irregularities *ketidakteraturan*

"Your biggest enemy is yourself." This idea is being explored by teachers as they and their students deal with the issue of bullying. The hardest thing is to control our own emotions because some teachers, like myself, are **used to the stern** approach in disciplining students," vice principal of SMAN 103 state high school in East Jakarta, Budi Muntoro, told The Jakarta Post on Wednesday. Most people do not realize that at some stage, adults - parents and teachers - unconsciously teach **bullying to children** especially in the way they use violence in education. "About 50 percent of teachers might be guilty of bullying at some point," said Budi. SMAN 103 is one of three public high schools in Jakarta taking part in a pilot project on bullying prevention.

Teachers and principals from the school participated in a workshop on bullying hosted by the Semai Jiwa Amini Foundation in September. The workshop was attended by 57 SMAN 103 teachers. "Previously, I thought bullying was only physical violence. But now I realize that it also involves psychological aspects," said Budi who teaches geography. "So, the violence is not just physical but it can also be in the form of verbal and non-verbal expressions," said the 43 year-old teacher. Budi, who has been teaching for 23 years, now

tries to watch his words. "I never thought before that calling students by their nicknames was bullying," he said. Budi, describing himself as a former "killer" teacher, said he used to regard slapping and pinching as common in disciplining students. "Now, we give priority to counseling rather than just punishing problematic students," Budi said, referring to consultation hours provided once a week for students.

mengakui bahwa blio tidak

SMAN 103 currently has four teachers who have counseling hours, with five intern teachers assisting them. Those teachers rarely helped students with counseling before, but lately they provide more time on a weekly basis for the activity, which is a good thing," said 15-year-old Sari, one of 840 students at SMAN 103. Asked about the benefit of the counseling, second year student Sari acknowledged she was not used to sharing her private thoughts with others, including teachers, but the service was helpful for some of her troubled friends. Budi said he has been trying for years to change his rather militaristic approach in the classroom. "Now, I don't want to have obedient students just because they are afraid of me." However, he said some students tended to do as they pleased if they were not punished harshly. "I'm still looking for a solution, but of course I don't want to go back to my old ways of teaching."

7. Which of the following is closest in meaning to "stern" in paragraph 1?

- (A) uncompromising *tanpa kompromi*
- ~~(B) strict~~ *ketat*
- (C) frightening *menakutkan*
- (D) lenient *lemah lembut*
- (E) ruthless *kejam, tanpa ampun*

ketat
strict

8. According to the passage, which of the following best describes the word "bullying" in paragraph 1?

- (A) nuisance *gangguan*
