

Airdrop 007- Conclusion

Text 1

Microplastics have infiltrated every corner of the planet, from the deepest ocean trenches to remote, uninhabited islands. They have been discovered in Antarctica's sea ice, marine animals' digestive systems, and even the drinking water we consume. These tiny plastic fragments are not just found in water but have also spread widely across land, including farmland and food sources. A 2022 analysis by the Environmental Working Group found that nearly 20 million acres of U.S. cropland have been contaminated with "forever chemicals" from plastic waste, largely due to the use of sewage sludge as fertilizer. Similarly, in Europe, up to 10 million tonnes of sewage sludge is produced annually, with nearly 40% applied to farmland, making it one of the largest global reservoirs of microplastics.

Research from Cardiff University highlights the alarming scale of this issue, showing that wastewater treatment plants trap enormous quantities of microplastics in sewage sludge rather than releasing them into clean water. The UK, in particular, has some of the highest microplastic concentrations in Europe, with 500 to 1,000 particles per square meter of farmland. Further studies have revealed that these plastics persist in soil for decades, infiltrating deeper layers and spreading even to areas where sludge was never directly applied. Ploughing accelerates this process, increasing the distribution of microplastics across agricultural land.

The long-term consequences of microplastic accumulation on farmland extend beyond soil contamination. Rain and irrigation gradually wash these particles into rivers, lakes, and groundwater, contributing to the growing plastic crisis in aquatic ecosystems. A study in Ontario, Canada, found that 99% of microplastics from sludge eventually enter waterways, making runoff a major driver of plastic pollution in rivers and oceans. As microplastics continue to cycle between land and water, their widespread presence raises concerns about food safety, environmental health, and the urgent need for sustainable waste management practices.

1. What can be inferred about the future consequences of using sewage sludge as fertilizer?

- ☒ A. The accumulation of microplastics in soil may affect future agricultural sustainability.
- ☐ B. Microplastics in sewage sludge will decompose naturally over time.
- ☐ C. Farmers will completely stop using sewage sludge in the near future.
- ☐ D. The presence of microplastics in soil will benefit crop growth.
- ☐ E. Sewage sludge contamination is only a short-term issue.

kenapa mikroplastik dalam limbah dapat membahayakan bagi kesehatan manusia

2. Why might microplastics in farmland pose a threat to human health?

- ☐ A. Microplastics improve soil aeration, making food crops grow faster.
- ☐ B. Farmers can remove microplastics easily before selling their produce.

- ☒ C. They could enter the food chain through crops grown in contaminated soil.
- D. The presence of microplastics reduces the need for chemical fertilizers.
- E. They only affect marine life, not land-based food production.

3. What can be inferred about the persistence of microplastics in the environment?

- A. Microplastics primarily remain in water and do not spread to land.
- ☒ B. Microplastics are nearly impossible to eliminate from the environment.
- C. Microplastics can be easily removed through improved sewage treatment methods.
- D. Most microplastics decompose naturally within a few years.
- E. Microplastic contamination is limited to urban areas with high pollution levels.

4. What can be inferred about the role of agriculture in microplastic pollution?

- ☒ A. Agricultural practices may be unintentionally worsening microplastic pollution.
- B. Microplastics in farmland remain in place and do not spread further.
- C. Farmers have little control over the microplastics accumulating in soil.
- D. The use of sewage sludge on farmland has minimal impact on microplastic levels.
- E. Microplastic pollution in agriculture is a minor issue compared to industrial pollution.

false

5. What can be inferred about wastewater treatment and plastic pollution?

- ☒ A. Efforts to treat wastewater do not fully prevent plastic pollution.
- B. Wastewater treatment plants completely eliminate microplastics from the environment.
- C. Most microplastics remain trapped in wastewater and do not enter natural ecosystems.
- D. Improved wastewater treatment has significantly reduced plastic pollution worldwide.
- ☒ E. Wastewater treatment is an effective solution to stop microplastics from spreading.

6. What can be inferred about the impact of ploughing on microplastic distribution?

- A. Ploughing helps contain microplastics by keeping them in a single location.
- B. Microplastics are only found on the surface and do not move deeper into the soil.
- C. Agricultural land that has been ploughed is free from microplastic contamination.
- D. Ploughing speeds up the natural decomposition of microplastics in farmland.
- ☒ E. Ploughing contributes to the spread of microplastics beyond areas where sludge was originally applied.

Rozy, a South Korean virtual influencer, has captivated over 130,000 Instagram followers with her flawless looks and ^{Kalining} globetrotting adventures—yet she isn't real. Created by Seoul-based Sidus Studio X, Rozy is a hyper-realistic digital figure, blending AI, CGI, and robotics to exist between reality and the virtual world. Since her debut in 2020, she has signed lucrative brand deals, walked virtual runways, and even released music. As the virtual human industry flourishes, companies increasingly turn to these never-aging, scandal-free influencers to market their products, fueling both fascination and concerns over unattainable beauty standards.

Using advanced CGI, Rozy appears in various digital and real-world campaigns, sometimes fully rendered and other times superimposed onto human models. Similar influencers, such as Lucy—created by Lotte Home Shopping with video game software—have also gained popularity. These virtual figures engage fans just like human influencers, sharing curated “experiences” and even interacting through social media. Many younger Koreans, raised in a digital-first culture, have embraced them. Some, like 23-year-old Lee Na-kyoung, initially believed Rozy was real and continued the virtual friendship even after discovering the truth.

Beyond fan engagement, virtual influencers have proven highly profitable. Rozy alone is projected to generate over 2 billion Korean won (\$1.52 million) in revenue, attracting sponsorships from luxury brands like Chanel and Hermes. Lotte's Lucy has also secured advertising deals with finance and construction firms, helping traditional industries appeal to younger demographics. Unlike human influencers, these digital stars require minimal maintenance—taking only days to create new content—making them a cost-effective and controversy-free marketing tool. As their presence expands, they redefine influencer culture, blurring the line between human connection and artificial appeal.

7. What can be inferred about the future of influencer jobs?

- A. Human influencers are more in demand than ever before.
- B. AI-generated influencers are only a temporary trend.
- ☒ C. AI-powered influencers have the potential to replace human influencers.
- D. Companies prefer real influencers due to their authenticity.
- E. Virtual influencers are unlikely to grow beyond niche industries.

8. Why might companies prefer virtual influencers over human ones?

- A. Human influencers are no longer influential on social media.
- B. The cost of using virtual influencers is much higher than using real people.
- ☒ C. Virtual influencers are less likely to cause scandals or controversies.
- D. Virtual influencers are more skilled at modeling and acting.
- E. Companies face backlash for using virtual influencers in marketing.

9. What can be inferred about sponsorship in relation to virtual influencers?

- ☒ A. Companies see virtual influencers as valuable marketing assets due to their profitability and low risk.
- B. Virtual influencers struggle to attract sponsorships from major brands.
- C. Companies are hesitant to invest in virtual influencers because they are not real people.
- D. Human influencers remain the primary choice for companies despite the rise of virtual influencers.
- E. Sponsorship opportunities for virtual influencers are limited to the fashion industry.

10. Which of the following can be inferred about being an influencer?

- A. Influencers struggle to attract major brand sponsorships.
- B. The financial success of influencers is declining due to market saturation.
- C. Virtual influencers earn less than their human counterparts.
- D. Only real-life influencers can generate significant revenue.
- ☒ E. Being an influencer, whether virtual or human, can be highly profitable.

11. What can be inferred about virtual influencers from the passage?

- ☒ A. Virtual influencers reinforce unrealistic beauty standards through digital perfection.
- B. Virtual influencers struggle to generate revenue compared to human influencers.
- C. The popularity of virtual influencers has no connection to beauty ideals.
- D. Being an influencer, whether virtual or human, is not a profitable career.
- E. Traditional beauty standards are no longer relevant due to virtual influencers.

Upin & Ipin is a popular Malaysian animated series that follows the adventures of two ^{usil, nakal} mischievous twin brothers, Upin and Ipin. The show is set in a small village in Malaysia and revolves around the daily lives of the two young siblings and their friends. The twins are six years old and are known for their playful nature, curiosity, and mischievous behavior. The series captures the essence of Malaysian culture, incorporating local traditions, values, and customs, making it beloved by both children and adults alike.

The characters in Upin & Ipin come from various walks of life, which helps teach young viewers important life lessons, such as the value of friendship, respect for others, and the importance of honesty. In addition to Upin and Ipin, the show features a colorful cast of characters, including their older sister, Kak Ros, their best friend, Ehsan, and the wise but humorous character, Tok Dalang. Together, they face everyday challenges, such as school activities, family gatherings, and even learning about the Islamic faith and traditions.

The show has gained a massive following, not only in Malaysia but also in neighboring countries such as Singapore and Indonesia. Upin & Ipin has expanded into various forms of media, including films, merchandise, and even theme park attractions. The show's ability to blend entertainment with educational content has made it a significant part of children's television in Southeast Asia. Through humor, relatable characters, and positive messages, Upin & Ipin continues to be a beloved series for children of all ages.

12. What can be inferred about the role of Upin & Ipin in children's education?

- A. It provides entertainment without any educational value.
- ☒ B. It incorporates moral and educational lessons in an engaging way.
- C. It focuses solely on action and adventure themes.
- D. It is only meant for entertainment without deeper messages.
- E. It does not appeal to young audiences.

13. What does the expansion of Upin & Ipin into films, merchandise, and theme parks indicate?

- ☒ A. The franchise has achieved commercial success.
- B. The show is struggling to gain popularity.
- ☒ C. The show known in Southeast Asia.
- D. The show has no appeal outside television.
- E. The franchise is losing its audience.

14. What can be inferred about Upin & Ipin's success in other countries?

- ☒ A. The themes and messages are universal.
- ☐ B. The show is only relevant to Malaysian audiences.
- ☐ C. International viewers cannot relate to the story.
- ☐ D. The show is not well-known outside Malaysia.
- ☐ E. The show is difficult to understand for non-Malaysians.

Text 4

Educated is a memoir by Tara Westover that tells the story of her journey from growing up in an extremist, anti-education family to earning a doctorate at the University of Cambridge. Born into a Mormon survivalist family in rural Idaho, Westover never attended school until she was 17. Her father, who was deeply distrustful of the government, forbade formal education and medical treatment, while her mother, a herbalist and midwife, supported his beliefs. In this restrictive environment, Westover grew up with minimal exposure to books and spent most of her time working in her family's junkyard.

Determined to learn, she took it upon herself to self-educate. She taught herself math and grammar, eventually gaining admission to Brigham Young University. In this new academic environment, she was exposed to knowledge that challenged everything she had been taught, from history to science. However, her intellectual growth came at a cost—her relationship with her family began to deteriorate. Her father saw her pursuit of education as a betrayal of their values, creating a deep conflict between her love for her family and her desire for personal growth.

This book is not just an inspiring story about education but also a profound reflection on identity, family, and the freedom to think independently. Westover illustrates that education is not merely about attending school or earning degrees but about having the courage to question, learn, and shape one's own path. Written with emotional depth and tension, Educated invites readers to reflect on how education can be a tool for liberation while also posing difficult choices between familial loyalty and self-discovery.

15. What can be inferred about the impact of education on Tara Westover's life?

- ☒ A. Education helped her escape a restrictive environment and discover new perspectives.
- ☐ B. Education had little effect on her personal beliefs and choices.
- ☐ C. She pursued education only to prove her family wrong.
- ☐ D. Her education completely erased her past experiences.
- ☐ E. She remained unchanged despite her academic achievements.

16. Which of the following can be inferred from the text about Tara Westover's upbringing?

- ☒ A. Her family's extreme beliefs isolated her from mainstream society.
- ☐ B. Her family encouraged her to explore different perspectives and ideas.
- ☐ C. She had access to a wide range of educational resources at home.
- ☐ D. Her parents valued formal education but could not afford to send her to school.
- ☐ E. She grew up in a community that actively supported academic achievement.

17. What can be inferred about education's role in our life?

- ☐ A. Education always strengthens family relationships.
- ☐ B. Formal schooling is the only way to gain knowledge.
- ☒ C. Education provides opportunities for personal growth and independence.
- ☐ D. Education has little impact on shaping one's identity.
- ☐ E. The pursuit of education guarantees a conflict-free life.

18. That can be inferred from the text about extremism?

- ☒ A. Extremist beliefs can lead to isolation from mainstream society.
- ☐ B. Extremism always results in complete rejection of family members.
- ☐ C. People with extremist beliefs are unable to change their perspectives.
- ☐ D. Extremist communities encourage critical thinking and open dialogue.
- ☐ E. Extremist ideologies rarely affect personal growth and education.

19. What can be inferred about Tara's father's attitude toward education?

- ☐ A. He believed formal education was a threat to their way of life and values.
- ☐ B. He encouraged his children to seek knowledge and academic success.
- ☐ C. He saw education as a tool to strengthen their survivalist beliefs.
- ☐ D. He was indifferent toward formal schooling and allowed his children to choose.
- ☒ E. He valued education but preferred alternative learning methods over traditional schooling.

20. What can be inferred about the relationship between environment and education?

- ☐ A. Education is independent of one's upbringing and surroundings.
- ☐ B. Restrictive environment always leads to a rejection of education.
- ☒ C. One's environment can significantly shape access to and perception of education.
- ☐ D. Formal education is the only way to overcome a challenging environment.
- ☐ E. People raised in anti-education environments rarely seek higher learning.
