

MAIN IDEAS

Text 1

Yet the popularity of rock climbing and its sister sport, bouldering, is raising questions about the damaging environmental effects of climbing chalk—a ubiquitous and essential climbing tool. Made from magnesium carbonate, climbing chalk is the same substance that gymnasts and weightlifters use to improve their grip on bars and weights. In fact, it was first introduced to rock climbing in the 1950s by John Gill, who was a gymnast in college before he turned his attention to bouldering. Since then, amateur and professional climbers alike have come to depend on the chalk's desiccating and friction-inducing properties—and have been leaving streaks of the stuff on rock faces around the world.

The resulting “chalk graffiti” has become so bad in the United States that parks are beginning to restrict its use. Utah's Arches National Park allows only colored chalk that mostly matches rocks, while Colorado's Garden of the Gods National Natural Landmark banned all chalk and chalk substitutes. Native American tribes have declared areas under Indigenous control off-limits to climbers, not only because of unsightly chalk marks but also to preserve spiritually important areas.

efek negatif Kapur terhadap tumbuhan dan proses pertumbuhan

Beyond the visual pollution, new research suggests chalk may be harming the flora that grows on rocks. The latest study on the effects of climbing chalk, released October 2020, found that it negatively impacted both the germination and survival of four species each of rock-dwelling ferns and mosses in laboratory settings. Wiping it off doesn't seem to help; chemical trails on cleaned boulders changed the rock surface's pH balance, which could affect the ability of plants to grow there in the future.

Adapted from National Geographic, Rock climbing is getting more popular—and that concerns conservationists.

- yang ingin dikatakan penulis kepada pembaca adalah
1. By writing paragraph 1, the author intends to tell the reader about ...
 - (A) The rock climbing's sister sport
 - ☒ (B) Climbing chalk might have polluted the environment Mendaki batu kapur mungkin akan mencemari lingkungan
 - (C) The brief history about rock climbing sport
 - (D) Chalk graffiti now being restricted in some USA's national parks
 - (E) The climbing rock have significant impact to the flora surrounding the rocks
- berdasarkan teks, paragraf 4 mungkin akan membahas
2. Based on the passage, paragraph 4 most likely discusses ...
 - (A) Close the rock-climbing sport due its environmental damages
 - (B) The chemical trails on boulder change the ability of plants to grow
 - (C) New formula of rock-climbing chalk so it doesn't pollute the environment
 - ☒ (D) More environmentally friendly ways to play rock climbing cara yang lebih ramah lingkungan untuk mendaki batu kapur
 - (E) The popularity of rock climbing among the people in USA

Text 2

To some, coffee represents nothing more than a jolt of energy to start the day. But as a new exhibition at the Museum for Islamic Art in Jerusalem demonstrates, the drink has been the subject of political and religious debates, cultural exchange, and culinary innovation for centuries.

Coffee originated in Ethiopia before spreading to Yemen and beyond, reaching Mecca and Cairo by the end of the 15th century. With the Ottoman Empire's dominance of the Arabian Peninsula, coffeehouses popped up around the region.

“One of the reasons that the institution of the café was so successful in the Middle East, a region heavily populated by Muslims, who are prohibited from drinking wine, was people's hunger for a place where they

could simply meet and talk," Amnon Cohen, an Islamic and Middle Eastern studies scholar at the Hebrew University of Jerusalem, tells Haaretz.

Religious authorities have engaged with coffee in many different ways. For some Muslim officials, coffeehouses represented a threat to mosques as central gathering places, wrote John McHugo for BBC News in 2013. But coffee also helped Sufi worshippers stay alert during prayer services. Meanwhile, Jewish religious scholars have debated whether coffee should be consumed on the sabbath and whether Jews should visit Christian-owned coffeehouses.

Adapted from smithsonianmag.com, Tracing Coffee's Travels From the East to the West

3. The main idea of the text is ...

- (A) Middle Eastern people love to drink coffee
- (B) Coffee used as a substitution of wine
- ☒ (C) The brief history of coffee and coffeshop in the Middle East
- (D) Reasons why muslim brought the coffee from Ethiopia
- (E) The success story of café in the Middle East

Sejarah dari kopi dan kedai Kopi di timur tengah

- ☒ (A) Café was so popular because people gather there to talk with each other
- (B) Muslims are prohibited from drinking wine yea, but not correct yet
- (C) Regardless of social position, café can make people gather doesn't mention this topic
- (D) Café was the place to fulfil people's hunger for drinking wine not based on topic
- (E) Only in café people can meet and talk not really

cafe menjadi sangat populer karena orang berkumpul di sana untuk mengobrol satu sama lain

4. By writing paragraph 3, the author stated that

Text 3

Hydrogen has an energy density three times that of petrol. It can be used to generate electricity using a fuel cell, and hydrogen-fuelled cars are already commercially available. When hydrogen gas is used to produce energy, the only product formed is pure water.

One prospective source of renewable energy is hydrogen gas produced from water with the aid of sunlight. Researchers at Linköping University, Sweden, have developed a material, nanoporous cubic silicon carbide, that exhibits promising properties to capture solar energy and split water for hydrogen gas production. The study has been published in the journal ACS Nano.

The material, which they call nanoporous 3C-SiC, has promising properties that suggest it can be used to produce hydrogen gas from water using sunlight. The present study has been published in the journal ACS Nano, and in it the researchers show that this new porous material can efficiently trap and harvest ultraviolet and most of the visible sunlight. Furthermore, the porous structure promotes the separation of charges that have the required energy, while the small pores give a larger active surface area. This enhances charge transfer and increases the number of reaction sites, thus further boosting the water splitting efficiency.

Producing hydrogen gas by splitting water molecules with the aid of solar energy is a sustainable approach that could give hydrogen gas using renewable sources without leading to carbon dioxide emissions. A major advantage of this method is the possibility to convert solar energy to fuel that can be stored.

Adapted from sciencedaily.com, New porous material promising for making renewable energy from water

5. By writing paragraph 2, the author intends to state that ...

- (A) Nanoporous cubic silicon carbide developed by at Linköping University

- researchers is the latest innovation of hydrogen gas
- (B) Nanoporous cubic silicon carbide can harvest ultraviolet and most of the visible sunlight
- (C) Nanoporous cubic silicon carbide further boosting the water splitting efficiency
- (D) Nanoporous cubic silicon carbide made possible to convert solar energy to fuel
- ~~(E) Nanoporous cubic silicon carbide produce hydrogen gas from water using sunlight~~
6. From the text, the author stated these ideas, except ...
- (A) Pure water is the emission of hydrogen gas
- ~~(B) The small pores structure give a less active surface area~~
- (C) The study of nanoporous 3C-SiC has been published in the journal ACS Nano
- (D) Water and solar light are the components of making a hydrogen fuel
- (E) Hydrogen gas is one of the environmentally friendly fuels

Text 4

The Malaysian government has been asked why it revoked emergency Covid regulations as cases continue to spike. Malaysia has reported more than a million cases and 8,000 deaths so far, but experts warn the real numbers are much higher as testing rates are low. Hospitals are crowded and overwhelmed - recent images showed patients sitting on chairs and sharing oxygen cylinders. The country is also currently under a state of emergency, which will end on 1 August and will not be extended.

Opposition leaders said they were not informed about the annulment, which happened last week, and demanded to know what the impact on the wider public would be. "Why were we not informed? Whose decision was it?" said Democratic Action Party deputy chairman Gobind Singh Deo during a parliamentary session on Tuesday. These emergency ordinances included allowing people to be fined for breaching movement restrictions.

Malaysia is now recording more than 14,000 cases a day, with a record 207 deaths recorded on Tuesday. Hospitals have been turning away patients, with even those who do get admission not guaranteed beds. On Monday, hundreds of junior doctors walked out of hospitals and medical facilities across the country, saying they deserved permanent jobs and better conditions.

Undertakers and funeral workers have also told local reporters that they are overwhelmed with requests to bury Covid-19 victims, many of whom have died at home. Some experts had said that even the current emergency measures were "half-baked" and would not help improve the situation.

Adapted from BBC.com, Anger as Covid-ravaged Malaysia lifts pandemic measures

7. The author describe the terrible conditions of Coronavirus pandemic in Malaysia by ...
- author mendeskripsikan kondisi buruk dari Pandemi di malaysia dengan*
- (A) Stating the cases and the death records in Malaysia
- ~~(B) Release the state of emergency status despite increasing Coronavirus case~~
- (C) Hospital cannot guarantee patients to get beds and treatment
- (D) The cemetery fulfilled with Coronavirus deaths
- (E) Junior doctors overwhelmed with Coronavirus patients
- berdasarkan paragraf 1, pemerintah Malaysia di Kritik Karena mencabut keadaan gawat darurat oleh*
8. Based on paragraph 1, Malaysian government get criticized about revoking the emergency covid regulations by ...
- (A) Parliament
- (B) Funeral workers

melepaskan status gawat darurat meskipun terjadi kenaikan kasus korona

- ~~(C) Opposition leaders~~
- (D) Doctors and junior doctors
- (E) Patients

Text 5

- 1 The applications, games, and websites that are promoted as 'educational' are not always the best ones for supporting learning. The fact that they are interactive does not necessarily mean that they are much better than an old-fashioned workbook with its right and wrong answers. Children may enjoy these products for a while but then get a bit bored. Thus, they are not the most appropriate or engaging way to learn.
- 4 Treat so-called 'free' applications with caution. Some will expose your child to advertisements. Others are designed to wait until your child is engaged in a game or storyline and then demand payment before they can go any further. This can lead to frustration as young children do not understand why they cannot continue. Sometimes it is better to make a small payment in advance if the application promises no further purchases. However, some applications are free to download and completely free of advertisements or in-app purchases.
- 10 Choosing an app needs the same kind of thought and care you would put into buying anything else for your child. Do not rely only on the star rating. Instead, read the user reviews and check the privacy policy if you are worried about the personal information that the app might be collecting. If you want your child to enjoy learning, develop curiosity, and think about things creatively, provide them with a range of games and apps. Open-ended games have become progressively more challenging and encourage children to explore and have fun. They are, therefore, more likely to establish a love of learning and to lay the foundation for their future development.

Physical activity, reading, and other more 'traditional' activities continue to play a very important part in children's development. But, most parents do rely on screen devices from time to time to engage their child while they are busy with something else. This is not a problem in itself, just as long as children's time is made up of a balanced range of activities.

9. How does the idea in sentence 6 relate to the other ideas in paragraph 2?

- ~~(A) Sentence 6 elaborates the other ideas in paragraph 2.~~ *kalimat 6 berkolaborasi dengan ide lain di paragraf 2*
- (B) Sentence 6 is the result of the other ideas in paragraph 2.
- (C) Sentence 6 strongly contradicts the other ideas in paragraph 2.
- (D) Sentence 6 is the implementation of the theory discussed in paragraph 2.
- (E) Sentence 6 provides another type of free applications discussed in paragraph 2.

10. The author would apparently agree that

- ~~(A) Open-ended games can stimulate children's love for learning~~

- (B) Some games and applications are boring because they are too easy
- (C) There is no convincing prediction for the future of the games and apps
- (D) It is better to pay for games in advance so that children can learn freely
- (E) Apps star rating provides users with reviews on the good things of games and apps
